Summary

Software Engineer at X-Venture with experience in designing, developing, and maintaining enterprise-grade backend applications using Java and Spring Boot. Experienced in working with high-profile enterprise and government clients, delivering secure and scalable software solutions. Skilled in building RESTful APIs, microservices-based architectures, and implementing secure authentication and authorization mechanisms.

Experienced in Azure monitoring, log analytics, and observability practices for application health, performance tracking, and system diagnostics. Hands-on experience with CI/CD pipelines, containerized deployments, and cloud-based environments, along with relational databases such as MySQL and Microsoft SQL Server. Proficient in API management and identity solutions including WSO2 API Manager, WSO2 Identity Server, and Keycloak. Passionate about AI-enabled software engineering and building secure, high-performance backend systems.

Skills

Languages Java C# Python JavaScript	Backend Development Spring Boot Spring Security Microservices REST APIs	Frontend Development React HTML CSS

Messaging & Integration Solace RabbitMQ	Version Control & Collaboration Git GitHub Bitbucket Jira	Design & Prototyping Figma Adobe Photoshop Adobe Illustrator

Professional Experience

X-Venture Global Solutions (Pvt) Ltd

Project OCEANSX - [OCEANS-X](#) | [API Catalogue](#) 

Software Engineer 06/2026 – Present

- Automated SCIM user extraction via Azure Pipelines across environments with Azure Key Vault integration.
- Exploring MCP and AI gateway integration within enterprise solutions as part of active project delivery.

Software Engineer - Intern 06/2025 – 06/2026

- Worked as an Identity and Access Management (IAM) integration and development specialist throughout the OCEANSX project.
- Implemented UI customization and functionality using JSP, JavaScript, React, and CSS for authentication and authorization flows, including login, registration, and user profile management.
- Developed Singpass federated authentication using Spring Boot and WSO2 integration for secure identity federation.
- Delivered Azure cloud-based deployments using Azure DevOps pipelines, including CI/CD automation, environment-level deployments, and Azure monitoring/observability.
- Hands-on experience in deploying applications using Helm and implementing solutions with Docker and Kubernetes.
- Collaborated in Agile teams, actively contributing to sprint planning, daily stand-ups, backlog refinement, and iterative delivery cycles.

Projects

APIRRA, *API Testing and Explorer Portal* 05/2026 – Present

A feature-rich web-based platform built using React for testing and exploring REST APIs through OpenAPI specifications, with a focus on simplicity, usability, and developer productivity. The platform provides API request execution, response visualization, API exploration, and interactive API documentation capabilities within a unified interface.

- Future Enhancements:**
- Implement Spring Boot backend services and API persistence.
 - Save, manage, and reuse custom API requests.
 - Support user-defined API collections and workspaces.
 - Introduce user authentication and authorization.
 - Transform the platform into a SaaS-based multi-user application.

Technologies: Spring Boot, React (TypeScript), TailwindCSS

LMS

04/2026 – Present

In-progress Learning Management System (LMS) built with Spring Boot, React, and Keycloak to provide students secure, role-based access to learning materials through a centralized platform, with REST APIs for backend services, React frontend, and integrated payment gateway support.

Technologies: Spring Boot, Spring Security, React, Keycloak

Mail Tracking System, University of Ruhuna

12/2024 – 04/2025

Developed a barcode-based mail tracking system to manage incoming postal mail, parcels, and documents with role-based access control, supporting departments and students across the university.

My Contributions:

- Implemented secure JWT-based authentication and role-based access control, ensuring strict authorization for administrators, mail agents, and super admins.
- Engineered a high-accuracy barcode generation and tracking system, enabling fast and reliable mail identification and retrieval.
- Built real-time mail tracking functionality using WebSocket, improving visibility of mail status updates across users.
- Automated mail workflow processes using MySQL Event Scheduler, significantly reducing manual intervention and improving processing efficiency.
- Integrated Spring Boot backend with React (TypeScript) frontend, delivering a responsive and seamless user experience.
- Developed automated email notification system using Java SMTP and Thymeleaf, enabling timely alerts for urgent and tracked mail.

Technologies: Spring Boot, React (TypeScript), MySQL, WebSocket, JWT Authentication, Docker, DigitalOcean, GitHub Actions

Education

Bachelor of Computer Science (BCS), University of Ruhuna

08/2022 – 10/2025

Physical Science (A/L), Sivali Central College

01/2011 – 12/2019

Certificates

- [Solace Certified Developer Practitioner](#) 
 - Docker Kubernetes Masterclass (Ongoing)
 - [Postman API Fundamentals Student Expert](#) 
- [WSO2 Certified Identity Server Developer - V7.0](#) 
 - [Master Git and GitHub](#) 

Extra Curricular

- **Senior Editor:** Computer Science Students' Community, University of Ruhuna
- **Marketing Team Lead:** InsurgeX_1.0 Intra-University Hackathon
- **Video Editor:** Leo Club University of Ruhuna
- **Throwball Team Member:** Sivali Central College
